ENJOY

Ritter Pen - over 60 years of writing instrument competence MADE IN GERMANY!

Benefit from over 60 years of experience in the manufacture of writing implements for the advertising media industry. Ritter Pen was founded in 1928 and celebrated its 90th anniversary in 2018. We have been manufacturing writing instruments of the highest quality for more than 60 years in our factory in Brensbach - in the heart of the idyllic Odenwald forest. From the initial idea and the CAD drawing for the company's own toolmaking, to the plastic injection molding and printing - at Ritter Pen everything is done under one roof. Production is based completely on our customers' wishes, i.e. manufacturing only begins after receipt of the order. Only then are the blanks printed and subsequently assembled in the desired CI-compliant color design with the matching refill.

This "Mix & Match" modular system permits an almost limitless variety of models and colors for all writing instruments manufactured in Germany. Some plastic housings are partially refined off-site - we work hand in hand with specialists for, e.g. velvety, soft-touch surfaces.

You will find an extensive range of complete assembled writing instruments in our Ritter Global line, which are manufactured in our own factory in China and partly by reputable specialists in the Far East. From inexpensive plastic promotional items to the exclusive metal writing instruments in our Premium Line, you will find the right writing utensil for every budget.

Please note:

On the catalog pages you will find various optional extras for some models that are subject to a surcharge. These are marked with *. Please refer to the surcharges in the price list.

IN JUST A FEW STEPS TO YOUR DESIRED BALL PEN

Whether online with our practical product configurator "Penbuilder" or in the classic way with our new product catalog - you can design your own desired ball pen in just a few steps:

- Choose your model: The price overview integrated in the price list will help you plan your budget. The overview of topics in the catalog also makes it easier to find the right model.
- Configure desired color: With Mix & Match, any color combination within the standard colors is permitted.
 Let your creativity run free and choose the right color to match your logo. We can also produce special colors for runs of 10,000 or more just ask us.
- The choice of refill is up to you whether medium line width or soft refills for smooth, comfortable writing, and the choice of black or blue ink. You can equip all our "Made in Germany" articles with the refill of your choice. But one thing always remains the same: perfect writing pleasure with document-proof high-tech refills according to ISO 12757-2. The refill page (p. 6+7) in the catalog and the information page for changing refills in the price list will help you.
- The logo upload function in our Penbuilder is the final step towards your perfect design - create the appropriate PDF file to get a first impression of your personal Ritter pen!

REFILLS

Pen refills at RITTER PEN

We make no compromises with our refills. Depending on the price segment, we offer different standard refills for our writing utensils. Even inexpensive budget refills meet the highest demands! The writing experience is perfect with the new BALANCE FLOW cartridge system, which will be used in all writing instruments manufactured in Germany from 2019:

BALANCE FLOW - the new refill system from Ritter Pen

High-tech, Swiss made refills are used for all ball pens manufactured in Germany. These correspond to the strict Swiss standard, are waterproof and ISO 12757-2 certified. Balance is a fundamental aspect when aligning a refill system for the perfect writing experience. Ritter Pen's BALANCE FLOW refill system is the point of intersection between a soft writing feeling and an optimum writing length with consistent quality. The BALANCE FLOW system will be installed on all Ritter Pen standard refills (Jogger, Marathon and Ultra with 1.0mm ball) from 2019. It is the refill of choice for lovers of soft, yet striking writing. We also plan to optimize Ritter Pen soft refills with a 1.2 mm ball with this system. The refill for lovers of soft, rich writing.

JOGGER refill

The most commonly purchased refill in the advertising industry. A million-seller. Perfect writing characteristics and a highly acceptable writing length.

Jogger	-		
ca. 2.000 m* Tip brass nickel-plated, 1.0 mm TC-ball ISO 12757-2 / document proof

Marathon Soft		mangour method are not the	
ca. 1.800 m*			
Tip brass nickel-plated, 1.2 mm TC-ball ISO 12757-2 / document proof			

ULTRA refill

This refill is a must for anyone who is interested in great value. A large-capacity refill that lives up to its name. Perfect writing characteristics and a writing length three times as long as a conventional X 20 refill quickly get writers' attention. A refill for image building.

	OLTAKA MCHATLILA 1923-12	
ca. 6.000 m* Tip Stainless steel, 1.0 mm TC-ball ISO 12757-2 / document proof		
Ultra Soft	10 -	-
ca. 4.000 m* Tip Stainless steel, 1.2 mm TC-ball ISO 12757-2 / document proof		

ULTRA METALL refill

The undisputed superstar among the refills. High-tech processing at its finest. Ultimate writing length and shelf life. Its metallic weight conveys its high quality. A refill for people who don't want to compromise on quality.

ULTRA SUPER SOFT refill

The Ultra refill is now also available in the Super Soft version with a 1.4 mm ball for an even softer, richer writing feel.

GEL refill

The only wet writing refill with near roller characteristics. A more fluid writing feeling is almost impossible. A refill for absolute enthusiasts.

Gel ca. 600 m* Tip Stainless steel, 0.7 mm TC-ball ISO 27668		GelStar' III
Mechanical Pencil

Budget Metall ca. 3500 m* ISO 12757-1		
Ritter Global		
Budget Slim		
ca. 300 m* ISO 12757-1		

* Writing length is not exactly measurable, because of many criterions e.g. tolerances in TC-ball, ball bearing, ink paste, thus different ink flow, quality of paper, writing pressure, climate, TC-ball size, etc. The standard refill for every pen you can find on the according page in catalogue for every model. The additional cost for refill upgrade please find in your pricelist.

Individuality is important! We make it possible: The Mix & Match symbol indicates that for the shown item several colors can be combined. The drawings show colour availability for the pen parts. Special production of parts in Cl colors possible on demand.

RITTER-PEN: WE MAKE YOUR PEN UNIQUE!

RITTER CARES

AS 621. 8 1. 20

FOR THE ENVIRONMENT

RECYCLING STANDARDS BY RITTER-PEN:

LEVEL 1:

Accumulated sprues (a by-product from mould injection) and remains are shredded and added back into the production of new parts. The proportion of this regenerated material is about 20-30%. This process is a standard procedure at Ritter-Pen and applies to all our plastic models.

LEVEL 2:

The proportion of recycled granules can be increased by shredding sprues & scrap with overproduction and unused parts. This too is a standard procedure at Ritter-Pen.

LEVEL 3:

Now we take the process a step further: our pens that carry the Recycled Crest are created with ABS plastic 100% obtained from plastic-rich waste streams. In one special procedure, product is separated and then processed into high quality granules. We are now completely redefining recycling, the new recycling standard at Ritter Pen.

ECOPLINE Bio-Clear Bio-Fresh

11

RECYCLING

Recycling paper and pure grade PET products, commonly used for bottles, polyester and fleece clothing, has been a longtime standard practice for recycling organizations. Up to now plasticrich waste such as, end of life cars, household and electrical appliances are usually salvaged for its metal only with their remains ending up at the dump or in an incinerator.

What's Different Now?

With a totally new process, the plastic content of these junk mountain sare being separated and sorted resulting in new raw material. All the plastic parts from your old vacuum cleaners, kitchen appliances and machine tools are separated, shredded and with the most modern technology prepared for SECOND LIFE production. In our case, a SECOND LIFE recycled granulate or a POSTCONSUMER plastic will be used to create a whole new advertising pen. RITTER PEN will manufacture many colorful, printable, promotional pens made from this SECOND LIFE recycled material. These writing instruments are characterized by this logo:

The Truth:

Compared to conventional production of plastics from crude oil, up to **80%** less energy is needed to produce the SECOND LIFE RECYCLATES.

Our SECOND LIFE RECYCLED pens are available in black and light grey. Customize with a splash of color, the ABS plastic pusher comes in your choice of 27 standard colors.

SECOND LIFE RECYCLED pens from RITTER-PEN – leaving another green footprint.

ECOZLINE

RITTER-PEN uses natural, completely biodegradable cellulose –base / bio-plastic for the production of our ECO-LINE. Also in high gloss transparent finish!

The most important part of this plastic is the cellulose. Cellulose is a natural polymer that forms the main component of a plant cell wall. Wood, for example, are rich in cellulose and serve as a starting material for the production of used material.

In a special procurement and treatment process cellulose acetate, a thermoplastic material can be derived from cellulose. Care is taken that the origin of the raw materials making this bio-plastic predominant of **renewable resources.** The pens in our ECO-LINE contain a large percentage of this natural bio-plastic. To ensure exceptional structural integrity a small amount of traditional ABS materials are used for the components that are exposed to high mechanical stress. Unlike corn starch or lactic acid products, cellulose acetate is scratch and heat resistant. It has similar performance characteristics as conventional plastics and is particularly suitable for mold injecting. Due to the nature of the material it is limited to a natural colour selection, however this organic compound possess a higher density than ABS plastic, which gives it a richer quality and a perfect surface for colorful and vibrant imprints.

Without leaving harmful residues bio-plastics can be decomposed by microorganisms leaving behind only water, carbon, and some biomass. Permanent higher temperatures and adequate moisture are prerequisite for an optimal decomposition; similar conditions that prevail in

industrial composting. The biodegradability of this material on an industrial scale is confirmed in accordance with the terms of DIN EN 13432:2000-12. Disposal of this bio-plastic is via the general household waste, contributing to the conservation of finite fossil fuels through thermal treatment. It releases the same amount of emissions generated by burning or composting of raw material (e.g. wood). There is no general regulation, which governs the recycling of plastics, therefore, we maintain a proper thermal treatment as the most sensible solution to dispose of bio-plastics.

Replacing oil as a raw material with a renewable raw material source allows the saving of fossil resources and a reduction of CO2 emissions. The development and processing of recyclable plastics, of course, is a step towards a more sustainable future. We must learn to give up finite resources - to love our environment.

Dimensions including frame 19.5 x 19.5 x 2,5 cm

INFORMATION REGARDING THE DIFFERENT METHODS OF ADVERTISING

The required film for screen printing must be applied in the correct direction, for BASIC & VOLUMES color prints with register crosses. Colors will be printed according to your color specifications (Pantone, HKS, RAL). Please consider the following for halftone prints: Screen is halftone 40 (40 lines per centimeter), Halftone is between 20% and 80%

· Despite the optimal matching of all imprinted components, imprints on metal pens are only partially scratch resistant.

PAD-PRINT

The film must be side inverted. Color specifications (Pantone, HKS, RAL) are required.

Please consider the following for halftone prints: Screen is halftone 48, (48 lines per centimeter), Halftone is between 20% and 80%.

 Minimum line thickness for films (screen- and pad imprint) is +0,15 mm and -0,3 mm.

· Regarding screen- and pad-prints according to color specifications (Pantone, HKS or RAL)on colored barrels, please consider that it might be necessary to print white background (i.e. one additional printing color)

· Despite the optimal matching of all imprinted components, imprints on metal pens are only partially scratch resistant.

AC ETCHING

The required film for screen printing must be applied in the correct direction. The etching on the surface will appear grey/brown depending of the coloration on the underlying material. Variations within one production is possible. Please note that for every 2000 pcs. etchings, we require one film (e.g. for 10,000 pcs. etchings, 5 films are required).

· Please note: Maximum line thickness of texts and logos is 1.2 mm.

For laser engraving we need high resoluted files (look at "FILES")

In this procedure, the logo is printed directly on the ballpoint pen and is used with our Crest models (on the clip) and Tri-Star (on clip and barrel). Digital printing is particularly suitable for multi-color logos and color gradients. The colors are converted into CMYK and therefore can differ slightly from the Pantone datas.

DIGITAL PRINTING

In this procedure, the logo is printed directly on the ballpoint pen and is used with our Crest models (on the clip) and Tri-Star (on clip and barrel). Digital printing is particularly suitable for multi-color logos and color gradients. The colors are converted into CMYK and therefore can differ slightly from the Pantone data. When creating the data please note that the required size for the respective model. To be foliated, 3 mm of trimming is required on the right and left sides.

FILES

Please provide:

 Vectorfiles: Illustrator CC2015, included texts have to be converted into text paths, in order to avoid problems with the fonts.

• Pixelfiles: Photoshop CS6 (600 dpi min.). The logo size must be 1:1 or greater.

NOTES

We manufacture quality
